

07 — Frontend Developer

[← Powrót do README](#) (../README.md) | [← Backend Developer](#) (./backend-developer.md) | [Następna: DevOps Engineer](#) → (./devops-engineer.md)

Zakres odpowiedzialności

Jako Frontend Developer w projekcie IOC Service jesteś odpowiedzialny za:

- Redesign Web UI z tech-centric na workflow-centric
 - Implementację komponentów Jinja2 templates (server-side rendering)
 - Accessibility (WCAG 2.1 AA)
 - Responsive design (tablet + desktop)
 - JavaScript interakcje (vanilla JS / HTMX / Alpine.js)
-

Component Architecture

Obecny stan

Aplikacja używa **server-side rendering** (Jinja2 templates) z minimalnym JavaScript. To jest świadoma decyzja — nie wprowadzamy SPA framework (React/Vue) ze względu na:

- Zespół backend-heavy
- Prosta interaktywność (formularze, tabele, filtry)
- SEO nie jest istotne (internal tool)
- SSR + HTMX daje 80% interaktywności SPA przy 20% złożoności

Docelowa architektura UI

```
app/templates/
├── base.html           # Master layout (nav, sidebar, footer)
├── components/        # Reusable components
│   ├── _table.html    # Data table (sortable, paginated)
│   ├── _badge.html    # Status badge (active, error, etc.)
│   ├── _alert.html    # Flash messages
│   ├── _pagination.html # Pagination controls
│   ├── _search_bar.html # Search with autocomplete
│   ├── _feed_card.html # Feed status card
│   └── _modal.html     # Modal dialog
├── auth/
│   ├── login.html
│   └── profile.html
├── dashboard/
│   ├── index.html      # Main dashboard (KPIs)
│   └── _feed_status.html # Feed status widget
├── indicators/
│   ├── search.html     # IOC search page
│   ├── detail.html     # IOC detail view
│   └── export.html      # Export dialog
├── admin/
│   ├── feeds.html       # Feed management
│   ├── feed_edit.html   # Feed configuration form
│   ├── users.html       # User management
│   ├── settings.html    # System settings
│   └── audit.html        # Audit log viewer
└── errors/
    ├── 403.html
    ├── 404.html
    └── 500.html
```

Technologie UI

Technologia	Rola	Uzasadnienie
Jinja2	Server-side templates	Już używane, team experience
HTMX	Partial page updates, AJAX	Minimum JS, progressive enhancement
Alpine.js	Client-side interakcje	Dropdowns, modals, toggles
TailwindCSS / Bootstrap 5	Styling	Utility-first, responsive
Chart.js	Wykresy na dashboard	Lightweight, no dependencies

UX/UI Requirements

Top 3 Workflows

Workflow A: Search & Export IOC

IOC Search

[Export ▼]

[Search query...]

[Search]

Filters:

Source: [All ▼] Type: [All ▼] Active: [✓]

TLP: [All ▼] Confidence: [≥50]

#	Value	Type	Src	Conf	Last
1	1.2.3.4	IP	MWDB	85	2h ago
2	evil.com	DOM	MISP	90	1h ago
3	a1b2c3..	HASH	AB	75	5h ago

Showing 1-50 of 15,432

[< 1 2 3 ... 309 >]

Workflow B: Feed Health Dashboard

Dashboard

154,320
Active IOC

10
Feeds

99.7%
Uptime

Feed Status:

Feed	Status	IOCs	Last Sync
CrowdSec	✓ OK	45K	5 min
MISP	✓ OK	12K	2h
MWDB	⚠ SLOW	8K	15 min
abuse.ch	✓ OK	89K	30 min
Bazaar	● DOWN	0	4h ago

[Sync All ▶]

Accessibility Requirements (WCAG 2.1 AA)

Kryterium	Wymaganie	Jak sprawdzić
1.1.1	Alt text dla obrazów	Lighthouse audit
1.4.3	Kontrast $\geq 4.5:1$ (tekst), $\geq 3:1$ (duży tekst)	axe DevTools
2.1.1	Keyboard navigation	Tab through all interactive elements
2.4.1	Skip navigation link	“Skip to content” na top of page
3.3.1	Error identification	Error messages powiązane z polami
4.1.2	ARIA labels	Dynamiczne elementy mają role i label

Testing Strategy

Typ	Narzędzie	Coverage
Visual regression	Percy / Playwright screen-shots	Kluczowe strony
Component testing	Playwright	Tabele, formularze, modals
Accessibility	axe-core + Lighthouse	WCAG 2.1 AA
Cross-browser	Playwright (Chrome, Firefox)	Desktop + tablet
Performance	Lighthouse	Score >90

Browser Compatibility

Browser	Min Version	Support Level
Chrome	100+	✓ Full
Firefox	100+	✓ Full
Edge	100+	✓ Full
Safari	16+	⚠ Functional
Mobile	N/A	✗ Out of scope (internal tool)

Performance Optimization

1. **Lazy loading** — ładuj tabele danych przez HTMX (partial update)
2. **Debounce search** — 300ms debounce na search input
3. **Pagination** — server-side, max 100 items per page
4. **Asset optimization** — minify CSS/JS, gzip w Nginx
5. **Caching** — ETag headers dla static assets (1 week)
